

AZSR170

70 AMP POWER RELAY WITH OPTIONAL MONITORING

FEATURES

- Up to 70 Amp / 600 VAC switching capability
- Optional NC mirror contact acc. EN 60947-4-1 for welding monitoring
- Wide load contact gap of ≥ 3.0 mm and optionally ≥ 3.42 mm
- High dielectric strength of 5 kV_{RMS}
- 10 kV surge withstand voltage
- Compact size with less than 670 mm² (1.04 sq.in) of board space required
- TÜV, UL / CUR and CQC approvals

CONTACTS

Arrangement load contact monitor contact (optional)	SPST-NO (1 Form A) SPST-NC (1 Form B) coupled to NO load contact
Ratings (max.) load contacts switched power switched current continuous current switched voltage contact load category monitor contact switched current recommended min. load	(resistive load) 42000 VA 70 A 70 A 600 VAC CC2 500 mA at 12 VDC 10 mA, 5 VDC, 50 mW (gold plated contact)
Approved ratings load contact	TÜV, UL/CUR, CQC 20 A make, 70 A carry, 20 A break at 600 VAC, resistive, 85°C, 50k cycles * [2] 20 A make, 70 A carry, 20 A break at 400 VAC, resistive, 85°C, 50k cycles [1][2][3] 20 A make, 55 A carry, 20 A break at 277 VAC, resistive, 105°C, 50k cycles [1][2][3] 50 A at 277 VAC, resistive, 85°C, 6k cycles [1][2][3] 70 A at 400 VAC, resistive, 85°C, 1k cycles [1][2][3] 70 A at 600 VAC, resistive, 85°C, 500 cycles * [2]
monitor contact	500 mA at 12 VDC, 105°C, 50k cycles Note: Approvals with * are at TÜV and CQC only.
Contact material load contact	AgNi (silver nickel) [1] AgSnO ₂ (silver tin oxide) [2] AgSnO ₂ +Ag (silver tin oxide, silver plated) [3]
monitor contact	AgNi+Au (silver nickel, gold plated)
Contact gap standard version option (200) version	(clearance of open load contacts) ≥ 3.0 mm ≥ 3.42 mm
Initial contact resistance load contacts	≤ 10 m Ω (at 6V/20 A, voltage drop method) < 1 m Ω (typ. at 70 A)
monitor contact	≤ 100 m Ω (at 6V, 100mA, voltage drop method)

COIL

Nominal coil voltages	6, 9, 12, 24, 48 (DC)
Dropout voltage	$\geq 5\%$ of nominal coil voltage
Holding voltage	$\geq 45\%$ of nominal coil voltage (at 23°C)
Coil power nominal holding power	(at 23°C) 2.5 W 0.4 W
Temperature rise	70 K at nom. coil voltage, 85°C
Insulation system	class F, max. temperature 155°C

GENERAL DATA

Life Expectancy mechanical electrical	(minimum operations) 1A: 3×10^5 ; 1A1B: 1×10^5 see approved ratings
Timing operate time release time	(at nominal coil voltage) ≤ 20 ms ≤ 10 ms (without coil suppression)
Dielectric Strength coil to load contact open load contact load to monitor contact open monitor contact coil to monitor contact	(at sea level for 1 min.) 5000 V _{RMS} 2500 V _{RMS} 5000 V _{RMS} 1000 V _{RMS} 1000 V _{RMS}
Surge Voltage coil to load contact open load contact load to monitor contact	(1.2/50 μ s pulses) 10 kV 6 kV 10 kV
Insulation Distances coil to load contact load to monitor contacts coil to monitor contact open load contact standard version option (200) version	(clearance / creepage) ≥ 8.0 mm / ≥ 8.0 mm ≥ 6.9 mm / ≥ 7.3 mm ≥ 1.3 mm / ≥ 1.4 mm ≥ 3.0 mm / ≥ 5.0 mm ≥ 3.42 mm / ≥ 5.0 mm
Insulation Type rated voltage ≤ 300 VAC rated voltage > 300 VAC	(coil to load contacts) Reinforced insulation, OVC III, PD2 Basic insulation, OVC III, PD2
Insulation Resistance	≥ 1000 M Ω (at 23°C, 500 VDC, 50% RH)
Temperature Range operating	(at nominal coil voltage) -40°C to 85°C (for load current ≤ 70 A) -40°C to 105°C (for load current ≤ 55 A)
Vibration Resistance	1.5 mm (0.062") DA at 10–55 Hz
Shock	10 g
Enclosure material protection category material group flammability	PBT RT II, flux proof IIla UL94 V-0
Terminals	Tinned copper alloy, THT PCB mounting
Soldering preheating soldering	(referring IEC 61760-1 wave soldering) 120°C (248°F) / ≤ 120 s 260 ± 5 °C (500 ± 9 °F) / $\leq 2 \times 5$ s
Dimensions and Weight	33.1 mm x 20.1 mm x 32.5 mm, 40 grams
Compliance	UL 508, IEC 61810-1, GB/T 21711.1 RoHS, REACH
Agency Approvals TÜV UL/CUR CQC	R 50618310 E365652 CQC 24002421520
Packing (pcs.)	40 per plastic tray 400 per carton box

COIL VOLTAGE SPECIFICATIONS

nominal	Voltage [VDC]		min. holding	max.	Resistance [Ω] $\pm 10\%$	Power (ref.) [W]	
	must operate contact gap 3.0 mm	3.42 mm				nominal	min. holding
6	4.2	4.8	2.4	6.6	14.4	2.5	0.4
9	6.3	7.2	3.6	9.9	32.4		
12	8.4	9.6	4.8	13.2	57.6		
24	16.8	19.2	9.6	26.4	230.4		
48	33.6	38.4	19.2	52.8	921.6		

Notes:

- All values at 23°C, upright position, terminals downward.
- Voltage max. is the voltage the coil can endure for a short period of time.
- To avoid overheating at elevated ambient temperatures, operate the coil at 55 - 70% of nominal coil voltage after applying the full nominal coil voltage for ≥ 200 milliseconds.
- Preferred coil voltages in bold face numbers.

COIL OPERATIVE RANGE

Note: Diagram shown for standard 3.0 mm contact gap version. For versions with 3.42 mm contact gap (option 200) the *must operate voltage* is approx. 14% higher.

TIMING DIAGRAM

Item	Description	Notes	Timing [ms]		
			min.	typ.	max.
t1	Full energization time	recommended value	200	-	-
t2	NO operate time	at nominal coil voltage (at 23°C) ¹⁾	-	< 15	20
		at nominal coil voltage (at hot coil) ²⁾	-	< 42	55
t3	NO bounce time	at nominal coil voltage	-	< 3	-
t4	NC operate time	at nominal coil voltage (at 23°C) ¹⁾	-	< 14	20
		at nominal coil voltage (at hot coil) ²⁾	-	< 40	55
t5	NO release time	without coil suppression	-	< 2	10
t6	NC release time	with suppression: $U_{BR}/U_{nom} = 2$ ³⁾	-	< 3	-
		without coil suppression	-	< 4	10
t7	NC bounce time		-	< 4	-
t _{arc}	arcing duration	if released under load, dependent on actual load condition			

ORDERING DATA

AZSR170-1A□□-□□D□□□

Options

nil: standard version
(200): 3.42 mm contact gap version

Nominal coil voltage
see coil voltage specifications table

Monitor contact

nil: without monitor contact
1BG: equipped with 1 Form B monitor contact

Contact material

nil: AgNi (silver nickel)
E: AgSnO₂ (silver tin oxide)
EP: AgSnO₂+Ag (silver tin oxide, silver plated)

Example ordering data

AZSR170-1A-12D AgNi contact material, 12VDC nominal coil voltage

AZSR170-1AE1BG-24D AgSnO₂ contact material, with 1 Form B monitor contact, 24VDC nominal coil voltage.

MECHANICAL DATA

Dimensions in mm. Tolerance ± 0.3 mm if not stated otherwise.
Notes: * Pin dimensions for reference only and given without tin coating.
Pins 5 and 6 are omitted in versions without 1 Form B monitor contact.

CAD data in attachment of this datasheet.

PCB FOOTPRINT / WIRING DIAGRAM

Layout and footprint recommendation. Dimensions in mm. Viewed towards terminals.
Note: Pins 5 and 6 are omitted in versions without 1 Form B monitor contact.

NOTES

General

1. All values in this datasheet are at reference temperature of 23°C (73°F) unless stated otherwise.
2. Evaluate the component's performance and operating conditions under the worst-case conditions of the actual application.
3. The datasheet and the component's specifications are subject to change without notice.

Storage, handling, and environmental guidelines

4. Relays are electromechanical components that are sensitive to shock. The relay's adjustment can be affected if the relay is subjected to excessive shock or excessive pressure is applied to the relay case. Relays which have been dropped must no longer be used.
5. Substances containing silicone or phosphorus must be avoided in the vicinity to the relay. Outgassing from these substances can penetrate the relay and adhere on the contacts. Deposits of these substances may act as insulators and adversely affect the contact resistance. Silicone can be found e.g. in gaskets, lubricants or filling materials, phosphorus can be found e.g. as a flame retardant in plastics.
6. Protect relays from atmospheres containing corrosive gases, liquids, or solids such as water vapor, H₂S, SO₂, NO₂, Cl, P, dust, and other harmful substances and elements. Corrosion of internal structures and contacts leads to malfunction and shortens the component's service life.
7. Prevent non-sealed relays and relays with opened vent hole from atmospheres subject to dust. Dust particles may enter the case and get stuck between the contacts, causing the contact circuits to fail. Do not use these relays in environments with explosive or flammable gases. Electrical arcing at the contacts could ignite these gases and cause fire.
8. For automated dual wave soldering process we recommend preheating with 120°C (248°F) for max. 120 seconds and a soldering temperature of 260 ±5°C (500 ±9°F) for max. 10 seconds soldering time (max. 5 seconds per wave). For manual soldering we recommend 350°C (662°F) max. temperature for max. 5 seconds. During the soldering process, no force may be exerted on the relay terminals.
9. Non-sealed relays must not be washed, immersion cleaned or conformal coated as substances may enter the case and cause corrosion or seizure of mechanical parts.
10. Avoid high frequency or ultrasonic vibrations on the relays as these can cause contact welding and misalignment or destruction of internal structures.
11. During operation, storage and transport, ambient temperature should be within the specified operating temperature range. Humidity should be in the range of 5% to 85% RH. Icing and condensation must be avoided. Relays stored for an extended period of time may show initially increased contact resistance values due to chemical effects such as oxidation.
12. With sealed versions of this relay type, the vent hole must be cut open after washing or conformal coating to achieve the specified performance and service life. Care must be taken to ensure no particles get into the relay as a result of the cutting process.

Design guidelines

13. The relay may pull in and operate with less than the specified *must operate* voltage value.
14. The coil's *must operate* and *min. holding* voltages, the coil's *ohmic resistance* and the relay's *operate time* depend on the temperature of the coil. The specified values are given for a coil temperature of 23°C and increase by approx. 0.39% per Kelvin of temperature rise. This circumstance must be considered, especially during operation with high load currents and elevated ambient temperature.
15. Coil suppression circuits such as diodes, etc. in parallel to the coil will lengthen the release time. We recommend using suppression circuits with a breakdown voltage of approx. 2 times the nominal coil voltage in order to achieve a quick release time.
16. For short-circuit performance according IEC62955, IEC61008-1 or IEC62752 (if datasheet has this parameter), coil suppression circuits with a breakdown voltage of ≥ 2 times the nominal coil voltage must be used. Using rectifier diodes or similar in parallel to the coil is not appropriate.
17. When using PWM coil control, use a fast-switching recirculation diode in parallel with the coil to keep the coil current during pulse pauses. To achieve the IEC62955, IEC61008-1 or IEC 62752 (if datasheet has this parameter) required short-circuit performance, when de-energizing the coil, the recirculation diode must be eliminated from the circuit to get a fast decay of coil current and a short release time. As PWM frequency we recommend ≥ 15 kHz in order to avoid audible noise from magnetostriction. To reduce EMI effects, we recommend to apply the PWM to the coil's inner layer terminal and have the outer layer terminal connected to ground or the supply rail.
18. Contact resistance is a function of load current, dwell time and wear level of the contacts. Immediately after closing the contacts, or if tested with low current only, the contact resistance will show a relatively high value. A low level steady state contact resistance is reached at higher current after a certain time in thermal equilibrium.
19. The relay dissipates heat form power losses through its load terminals. Provide sufficient cross section and area of the PCB traces so that they can act as heat spreader.
20. For PCBs with multiple relays, do not place the components directly next to each other. We suggest providing a mounting distance of minimum 10 mm to allow for better cooling.
21. A minimum load of 10 mA / 5 V / 50 mW is recommended for the gold plated monitor contact (if it has) to ensure a reliable and stable electrical connection.
22. As with any contact mechanism, the relay's NC monitor contact (if it has) bounces when switching. For evaluation of its signal, suitable debouncing measures must be taken to get a reliable signal.
23. At elevated ambient temperatures, after applying the rated nominal coil voltage for ≥ 10 times of operate time, the coil energization must be reduced to a holding level in order to reduce thermal stress and prevent the coil from overheating.

AZSR170

DISCLAIMER

This product specification is to be used in conjunction with the application notes which can be downloaded from the regional ZETTLER relay websites. The specification provides an overview of the most significant part features. Any individual applications and operating conditions are not taken into consideration. It is recommended to test the product under application conditions. Responsibility for the application remains with the customer. Proper operation and service life cannot be guaranteed if the part is operated outside the specified limits.

ZETTLER GROUP

Building on a foundation of more than a century of expertise in German precision engineering, ZETTLER Group is a world-class enterprise, engaged in the design, manufacturing, sales and distribution of electronic components. Our industry leadership is based on a unique combination of engineering competence and global scale.

For more information on other ZETTLER Group companies, please visit zettler-group.com. For support on this product or other ZETTLER relays, please visit one of the group sites below.
